SUBJECT INDEX *

Acetylcholine, channel(s), 153
Activity coefficient(s) (in) BSA, 489
Aminoacridine, indicator (interaction with) lipidic sites, surface charge density, 277
Analysis, continuous, 399
Anthracycline(s), (effect on) erythrocyte(s), 81
Antibiotics, β-lactam, 43
Antibodies, electrode, 43
Antiferritin, quantification, 89
Antigen, electrode, 89
Anti-IgG, quantification, 89
Antitumor drug(s), (effect on) erythrocyte(s), 81
ATPase, association (with) water, 457
—, coupling mechanism, 473
—, temperature inhibition, 419
ATPsynthase, complex, 147
Avarol, electrochemical behavior, 559
Avarone, electrochemical reduction, 559

Belousov–Zhabotinsky reaction, 243
Benzodiazepine(s), (interaction with) HSA, 535
Bilayer lipid membranes, see BLM
Bilirubin, reduction, 101
Biological systems, theoretical chemistry, (B.R.) 581
Biology, molecular (of) cells, (B.R.) 584
Biomembrane(s), School, 323
Biomolecules, electronic aspects, (B.R.) 317
Biophysics, 584
Biotechnology, 161, 253
BLM, charge transfer (across), 409
—, latrotoxin (as) receptor (in), 489
Bovine serum albumin, see BSA
Brdička current(s), 71
BSA, activity coefficient(s) in, 489
—, isoelectric point, osmotic pressure, zero charge point, 349

Calcium ATPase, association (with) water, 457
— —, coupling mechanism, 473
Cefotaxine, (action on) *Escherichia coli*, 43
Cell, hybrid, 253
—, molecular biology (of), (B.R.) 584
Cell, strain improvement, 253
— fusion, 9
— —, workshop, 7
Channel(s), acetylcholine diaphragm, 153
—, F_0, 147
—, gating, 349
—, postsynaptic, 153
Chara australis, translocation (of) oxidant(s), reductant(s), 519
— *corallina*, cell membrane, electrical model, operational impedance, 131
— — cyclosis, electrophysiological properties, fluorescence, 165
Charge density, hemoglobin, 349
— —, superficial, 277
— transfer, (across) BLM, 409
Chlorophyll, spectroelectrochemistry, 17
Chloroplast(s), dielectrophoresis, 549
Cytochrome *a*, azide binding, complex(es), 383
— —, electrochemical properties, 369
— —, potentiometric titration, 383
— —, spectral properties, 369, 383
— a_3, azide binding, complex(es), 383
— —, electrochemical properties, 369
— —, potentiometric titration, 369, 383
— *c*, carboxymethylated, electrochemistry, 27
— —, electrochemical properties, 297, 369
— —, potentiometric titration, 369
— —, reduction, 297
— —, spectral properties, 369
— — oxidase, 383
— — —, complex(es), 383
— — —, potentiometric titration, spectral properties, 383
— — — heme, (effect of) azide (on), electrochemical properties, 369
— — — —, spectral properties, 369, 383
— — reductase, electrochemical behavior, 297

Daunomycin, (effect on) erythrocyte(s), 81
Development, molecular, biology (of), (B.R.) 317
Diaphragm channel(s), postsynaptic, 153
Diazepam, determination, 535
Dielectrophoresis, 549
Dihydroxycyclohexenetetrone, electrochemical behavior, 523

* B.R. stands for Book Review.

Dilauroyl phosphatidic acid, cooperative unit size, enthalpy, transition temperature, 509
— phosphatidyl choline, cooperative unit size, 509
— — ethanolamine, cooperative unit size, 509
Dimiristoyl phosphatidic acid, cooperative unit size, enthalpy, transition temperature, 509
— phosphatidyl choline, cooperative unit size, 509
— — ethanolamine, cooperative unit size, 509
Dipalmitoyl phosphatidic acid, cooperative unit size, enthalpy, transition temperature, 509
— phosphatidyl choline, cooperative unit size, 509
Distearyl phosphatidic acid, cooperative unit size, enthalpy, transition temperature, 509
— phosphatidyl choline, cooperative unit size, 509
DNA, degradation, 523
—, (interaction with) membrane lipid(s), 111
—, uptake (by) *Streptococcus pneumoniae*, 269

Electrical phenomena (at) interphases, (B.R.) 582
Electric field, (effect on) Leptatocyte(s), 9
— —, (influence on) reaction rate(s), 205
— — *a.c.*, (by) mammalian cell(s), 287
Electrochemical filter, 175
Electrode, computer fitting, 399
—, selective, (B.R.) 318
— antibodies, 89
— antigen, 89
— enzyme, automatic (on) line, 399
— GOD, automatic (on) line, 399
— gold, 43
— lead, 59
— platinum oxide, 59
— thallium, 59
Electroluminescence, 105
Electromagnetic smog, 441
Electron transport, 523
Electroporation, 253
Electrotransfection, 253
Enzyme electrode, automatic (on) line, 399
— reaction(s), kinetics, 205
Epithelial cell membrane, depolarization, electrical properties, polarization, potassium conductance, 141
Erythrocyte(s), adhesiveness, 303
—, (effect of) anthracycline, antitumor drugs (on), 81
—, capacitance, 35
—, (effect of) daunomycin (on), 81
—, dielectrophoresis, 549
Erythrocyte(s), hemodynamic strain, 303
—, mobility, 35
—, permeability, 223, 231
—, (effect of) saponin (on), 35
—, (effect of) violamycin (on), 81
— membrane, capacitance, 35, 81
— —, potential, 223, 231, 303
Erwinia dissolvens, microbial fuel cell, 217
Escherichia coli, adsorption (of), 175
— —, (action of) cefotaxime (on), 43
— —, hydrogen potassium exchange, 183
— —, microbial fuel cell, 217
— —, potassium hydrogen exchange, potassium uptake, 183
— —, reducing activity, 43
Eukaryote, (B.R.) 579

F_0 channels, 147
F_0–F_1 ATP synthase, 147
Field electric, (influence on) reaction rate(s), 205
— — *a.c.*, (by) mammalian cell(s), 287
Filter, electrochemical, 175
Flurazepam, determination, 535
Fuel cell(s), microbial, 217

Gating channels, 349
Gene transfer, 253
— —, workshop, 7
Glucose, analysis, 399
—, oxidation, 59
GOD electrode, 399
Gold electrode, automatic (on) line, 43

Hemoglobin, aggregation, 349
—, catalytic current, 71
—, charge, charge density, disaggregation, free energy, isoelectric point, osmotic pressure, 349
Hepatocyte(s), (effect of) electric field (on), 9
HSA, (interaction with) benzodiazepine(s), 535
Hybrid cell(s), 253
Hybridoma(s), dielectrophoresis, 549
Hydrogen potassium, exchange (in) *Escherichia coli, Salmonella typhimurium*, 183
Hydroxyquinone derivative(s), electrochemical behavior, 523
Hydroxytetramethylpiperidine-oxyl, see TEMPOL

IgG, quantification, 89
Immunoassay, 89
Impedance, operational, 131
Interphase(s), electrical phenomena, (B.R.) 582

β-Lactam antibiotic(s), (effect on) *Escherichia coli*, 43
Lactobacillus plantarum, microbial fuel cell(s), 217
— *salivarius*, ion exchange, 503
Lampito mauritii, electroluminescence, 105
Latrotoxin, electrical properties, receptor (in) BLM, 361
Lead electrode, 59
Lipid membrane(s), (interaction with) DNA, 111
Lipidic site(s), association (with) aminoacridine, 277
Lipoic acid, transmembrane transport, 43
Liposome(s), unilamellar, fluorescence, 277
Lymphocyte(s), dielectrophoresis, 549

Mammalian cell(s), production (of) *a.c.* fields (by), 287
Madin Darby canine kidney cell membrane, depolarisation, electric properties, polarisation, potassium conductance, 141
Membrane(s), biological to artificial (for) technology, 121
—, capacitance, 35, 81
—, cation exchange, transient perturbation (and) potential, 193
—, conductance, 141, 419
—, depolarization, 141
—, electrical model, 131
—, — properties 141
—, gating channel(s), 349
—, hemodynamic strain, 303
—, industrial, 121
—, operational impedance, 131
—, permeability, 231, 303
—, polarization, 141
—, potential, 223, 231, 261, 303, 419
—, — oscillation(s), 559
—, surface charge, 429
—, surface potential, 429
—, transport (of) nucleic acid (across), 111
— basolateral, potassium conductance, transmembrane potential, 419
— epithelial cell(s), depolarization, electric properties, polarization, potassium conductance, 141
— lipid(s), (interaction with) DNA, 111
— liquid, perturbation, potential transient(s), 193
MEPC, miniature end plate current(s), 153
Microbial fuel cell(s), 217
Miniature end plate currents, 153
Mitochondria, bovine heart, proton flow, 147
Mitochondrial membrane, potential, 261
Molecular biology (of) cell(s), (B.R.) 584
Murine neuroblastoma cell(s), electrophoresis, fluorescence, mobility, surface charge, surface potential, 429
Myeloma cell(s), dielectrophoresis, 549

Nestoseine, (interaction with) oxygen, 339
Neuroblastoma cell(s), electrophoresis, fluorescence, mobility, surface charge, surface potential, 429
Nitroxide radical(s), e.s.r. spectra, 473
Nucleic acid(s), (B.R.) 579
— —, transport (across) membrane(s), 111

Operational impedance, 131
Oscillating phenomena, 243
— potential(s), 559
— reaction(s), 243
Ouabain, (effect on) membrane conductance, transmembrane potential, 419
Oxidant(s), translocation (of), technique, 519
Oxygen, dissolved, determination, (B.R.) 583
— superoxide radical ion, (interaction with) nestoseine, sobrerol, 339

Pacemaker(s), 559
Permeability, 223, 231, 303
Phenomena, electrical (at) interphases, (B.R.) 582
Phlorizin, (effect on) membrane conductance, transmembrane potential, 419
Phosphatidic acid(s), 509
Phosphatidyl choline, 509
— ethanolamine, 509
Photosystems I, photoelectrochemical model, *Z* scheme, 325
— II, photoelectrochemical model, *Z* scheme, 325
Plasmid(s), (B.R.) 579
Platinum oxide, electrode, 59
Postsynaptic channel(s), 153
Potassium, conductance, 141, 419
—, uptake (by) *Escherichia coli, Salmonella typhimurium*, 183
— bromide, activity coefficient, 489
— fluoride, activity coefficient, 489
— hydrogen, exchange (in) *Escherichia coli, Salmonella typhimurium*, 183
— iodide, activity coefficient, 489
— nitrate, activity coefficient, 489
— thiocyanate, activity coefficient, 489
Potential(s), membrane, 231, 261, 303, 419

Potential(s), oscillation(s), 559
—, standard, (B.R.) 319
—, surface, 277, 429
—, transepithelial, (effect of) ouabain, phlorizin (on), 419
—, transient, 193
—, transmembrane, 419
Proton translocation, 147
Protoplast(s), dielectrophoresis, 549

RBC see Erythrocyte(s)
Reaction rate(s), (effect of) electric field(s), 9
Red blood cell(s) see Erythrocyte(s)
Reductant(s), translocation, technique, 519

Salmonella typhimurium, adsorption, 175
— —, potassium hydrogen exchange, potassium uptake, 183
Saponin, (effect on) erythrocyte(s), 35
Sarcoplasmic reticulum vesicle(s), 457, 473
Smog, electromagnetic, 441
Sobrerol, (interaction with) oxygen, 339
Sodium potassium ATPase, temperature inhibition, 419
Standard potential(s), (B.R.) 319
Streptococcus aureus, quantification, 89
— *lactis*, microbial fuel cell(s), 217
— *pneumoniae*, DNA uptake, 269
Surface charge, 429
— — density, 277
— potential(s), 277, 429

TEMPO, association (with) sarcoplasmic reticulum vesicle(s), water, 473
—, e.s.r. spectra, 473
TEMPOL, association (with) sarcoplasmic reticulum vesicle(s), water, 473
—, e.s.r. spectra, 457
Tetrahydroxycyclohexadienedione, electrochemical behavior, 523
Tetramethylpiperidine-oxyl, see TEMPO
Thallium electrode, 59
Tissue(s), vasodialtor substances, (B.R.) 585
Trace analysis, (B.R.) 580
Tree(s), damage (by) electromagnetic smog, 441
Triton X-100, (influence on) membrane potential(s), 231

Urea, analysis, 399

Vasodilator substances, (B.R.) 585
Violamycin, (effect on) erythrocyte(s), 81

Water, association (with) ATPase, calcium ATPase, sarcoplasmic reticulum vesicles, TEMPO, TEMPOL, 473
—, perturbed structures, 473

Zero charge point, (of) BSA, 349
